SUMMARY

Early-career non-traditional software engineer with a Master of Science in Computer Science and 1+ years of professional experience developing and testing full-stack applications. Tech stack includes Java/Spring Boot RESTful API backend services with React and TypeScript on the front end.

SKILLS

- Languages: Java, TypeScript, JavaScript, HTML, CSS
- Frameworks / Libraries: Spring Boot, React
- Database & Cloud: SQL, PostgreSQL, GCP, BigQuery, Spanner, AWS exposure
- Testing & Development Tools: JUnit, Mockito, Jest, Git, GitHub, Maven, Gradle, Docker, Postman

EDUCATION

DePaul University, Chicago, IL — Master of Science in Computer Science *Jan 2024 – Jun 2026*
Florida International University, Miami, FL — Bachelor's in Interdisciplinary Studies *Jul 2016 – Jul 2018*
Elgin Community College, Elgin, IL — Associate of Arts *May 2014 – Jul 2016*

EXPERIENCE

PillAngel Medication Adherence Application | Graduate Capstone Project *Jun 2026*

React, TypeScript, Node.js, Express, Prisma, PostgreSQL, Jest, Docker

- Developed full-stack medication scheduling and intake-tracking features using React, TypeScript, Express, and PostgreSQL.
- Implemented scheduled backend jobs using node-cron to generate daily intake records, automatically identify missed doses, and perform catch-up processing after application downtime.
- Extended REST API and service-layer functionality to retrieve persisted medication statuses and integrated the frontend to display taken, missed, and pending doses after page refresh.
- Wrote Jest unit tests for scheduled jobs and backend services and collaborated through GitHub issues, branches, pull requests, and code reviews.
- Contributed to architectural analysis of the application, evaluating layered architecture, asynchronous workers, event-driven notifications, and scalability trade-offs.

Software Developer Apprentice | Cognizant *Jul 2022 – Sep 2023*

Developed Java/Spring Boot services and data-processing workflows for a retail e-commerce client, processing thousands of JSON, XML, and CSV order events.

Designed and implemented automated data validation logic to identify discrepancies between GCP Spanner and BigQuery, improving data consistency and troubleshooting efficiency.

Automated report generation and stakeholder notifications using BigQuery and Spanner, reducing manual reporting work and improving access to operational information.

Built and maintained REST API functionality using Java, Spring Boot, SQL, and Hibernate/JPA.

Collaborated with developers and business partners through Agile ceremonies, Git-based development, testing, and code review.

ADDITIONAL WORK HISTORY

Production Team Lead | Motis Brands - Mac's Custom Tie-Downs | Full-time *Aug 2024 – Present*

Release and audit daily production work orders, correct missing or inaccurate details, maintain a high level of attention to detail, and ensure accurate handoffs across departments.

Coordinate production workflow by supporting bottleneck areas, answering product questions, and maintaining clear communication with office teams to resolve order issues.

Perform quality inspections to ensure every product meets brand standards and customer specifications, contributing to consistent, on-time order fulfillment.

Created images and documentation with step-by-step build guides for all major products, improving training, eliminating build inconsistencies, and enhancing accessibility for non-English-speaking team members.

CERTIFICATIONS

Software Development Apprenticeship *Jul 2023*
Google IT Support Certificate by Coursera *Nov 2020*
